carine.logvinoff@sanofi.com

Carine Logvinoff received her PhD in Virology from University Claude Bernard (Lyon, FR). Following her postdoctoral research with C.M. Rice (Rockefeller University , NY, USA), she joined Sanofi R&D in 2004 and there contributed to the development of different viral vaccines from early phases to registration.

Since 2018, Carine is the Virology Global Analytical Expert in Analytical Sciences, sharing expertise and providing expertise and support on viral safety topics and analytics for vaccines on subjects as diverse as extraneous virus testing package, neurovirulence testing, or vaccine characterization. She also promotes innovation and supports new approaches/technologies implementation. As so, she works in close relationship with the labs developing alternatives methods such as high throughput sequencing for extraneous virus or for biological characterization, and new test design, development, qualification, and validation.
